HS: Headset Profile.

HF: Handsfree. The handsfree profile is a much richer profile for the car kit application, supporting more features.

SAP : Sim Access Profile only for the CK3500 car kit

Note 1 : Some phone software versions allow to configure the phone in the headset profile only.

Note 2 : Only one phone number by contact is sent with this kind of phone (this phone number is associated with the type "General").

Note 3 : The whole phonebook is automatically transferred to the CK3x00.

Note 4 : This feature is not useful because the phone does not support dialing from the car kit.

Note 5 : You can synchronize your phonebook by using a third party software : Nokia_810_contacts_sync_3_10.

The synchronization is not automatic : you have to launch this soft each time you want to actualize the phonebook of the car kit.

You can find this soft at : <http://www.nokia.com/nokia/0,8764,42796,00.html>

Note 6 : The synchronization of your phonebook is possible by using an other Bluetooth device : Bluetooth PC or an other Bluetooth phone.

*, : These phones need a special pairing mode (see "Advanced Settings" and "Pair with phone..." in the CK3x00 Menu).

**, : Still some problems due to the phone's firmware.

The phones with note 2 and 3 allow to download the "call history" of the phone to the car kit.

For the non-compatible phones, the "call history" is available in the car kit with the calls dialed from the car kit.
